

Burak Uzkent

CONTACT INFORMATION	Work Address 353 Serra Mall Stanford, CA, USA 94305	Phone: 585-301-0989 E-mail: uzkent.burak@gmail.com Web: https://buzkent86.github.io/
DATE OF BIRTH	22/06/1986	
NATIONALITY	Turkish	
RESEARCH INTERESTS	Visual Object Detection and Tracking, Weakly Supervised Learning, Audio Signal Processing	
EDUCATION	Rochester Institute of Technology , Rochester, NY, USA Ph.D., Chester F. Carlson Center for Imaging Science, August 2011 - June 2016 <ul style="list-style-type: none">• Thesis Topic: <i>Aerial visual vehicle detection and tracking using an adaptive, multi-modal sensor</i>• Advisor: Matthew J. Hoffman, Ph.D.• Co-advisor: Anthony Vodacek, Ph.D. University of Bridgeport , Bridgeport, CT, USA M.S., Electrical Engineering, August 2009 - May 2011 <ul style="list-style-type: none">• Thesis Topic: <i>Environmental non-speech sound classification with a new set of time-domain features</i>• Advisor: Buket D. Barkana, Ph.D. Eskisehir Osmangazi University , Eskisehir, Turkey B.S., Electrical and Electronics Engineering, September 2004 - May 2009 <ul style="list-style-type: none">• Thesis Topic: <i>Autonomous parallel parking of non-holonomic vehicles</i>• Advisor: Osman Parlaktuna, Ph.D.	
WORK EXPERIENCE	Postdoctoral Fellow Computer Science, Stanford University, Stanford CA Advisor : Stefano Ermon, Ph.D.	July 2018 -
	Computer Vision Engineer Planet Labs, San Francisco, CA Worked on object detection in satellite images using convolutional object detectors and built a large-scale object detection dataset using satellite images, and conducted research to tackle small object detection in low resolution satellite images.	June 2017 - July 2018
	Computer Vision Engineer Autel Robotics, San Ramon, CA Manager: YoungWoo Seo, Ph.D. Worked on a long-term target following system that will be deployed in the next generation drones. This work involves designing an online learning method to track a single object from a monocular camera at real-time on a low-end embedded platform. Other part of my work includes implementing and testing the tracking algorithm on the embedded platform.	August 2016 - June 2017
	Computer Vision Algorithm Engineer Intern	November 2015 - May 2016

Huawei R&D, Bridgewater, NJ
Supervisor: Dong-Qing Zhang, Ph.D.

My internship work was two-folds. First, I designed a subspace learning method to detect strangers in a family photo album using face-only and contextual features learned by fine-tuned Deep Convolutional Neural Networks. In the second step, I designed a probabilistic graph-based approach to assign semantic roles to individuals detected to be family members in the first step.

RESEARCH
EXPERIENCE

Graduate Research Assistant

April 2012 - June 2016

Chester F. Carlson Center for Imaging Science,
Rochester Institute of Technology
Supervisor: Matthew J. Hoffman, Ph.D.

Conducted research on aerial vehicle detection and tracking inspired by an adaptive, multi-modal sensor. This work involves developing computer vision and machine learning methods to detect, associate and track ground vehicles in an aerial video. The unique challenges posed by medium-to-high altitude aerial tracking is addressed by efficient use of rich hyperspectral data acquired by an adaptive hyperspectral sensor.

Graduate Research Assistant

May 2014 - June 2014

Chester F. Carlson Center for Imaging Science,
Rochester Institute of Technology
Supervisor: Elizabeth Cherry, Ph.D.

Performed research on 3-D MRI cardiac segmentation. A probabilistic graph-based approach has been proposed to segment the full tissue volume of the heart. A distance term has been incorporated to improve segmentation at the faint boundaries of the heart in MRI slices. The full tissue volume of the heart is required to fully understand the underlying mechanics behind the ventricular fibrillation.

Graduate Research Assistant

August 2009 - May 2011

Electrical Engineering Department,
University of Bridgeport
Supervisor: Buket D. Barkana, Ph.D.

Conducted research on classifying environmental sounds to classify abnormal and normal events. A new, pitch range-based features were proposed to improve the classification. On the classification end, a non-linear Support Vector Machine and Radial Basis Function Neural Network were trained to classify the test data. The results indicate that the new set of low dimensional features leads to higher accuracy rates when they are combined with the conventional Mel-Cepstrum Frequency Coefficients features.

Graduate Research Assistant

January 2009 - May 2009

Electrical and Electronics Engineering Department,
Eskisehir Osmangazi University
Supervisor: Osman Parlaktuna, Ph.D.

Conducted research on autonomous parallel parking of non-holonomic vehicles. Dimensions of a parking lot is sensed by the ultrasonic sensors mounted on a vehicle. Based on the dimensions of a parking lot, parallel parking is accomplished by a few or many repetitions of circular movements.

TEACHING
EXPERIENCE

Graduate Teaching Assistant

January 2015 - May 2015

Pattern Recognition, Chester F. Carlson Center for Imaging Science,
Rochester Institute of Technology
Instructor: John Kerekes, Ph.D.

Graduate Teaching Assistant

August 2011 - May 2012

Programming for Imaging Science, Chester F. Carlson Center for Imaging Science
Rochester Institute of Technology

Instructor: Jeff Pelz, Ph.D.

Graduate Teaching Assistant

August 2010 - May 2011

Digital Image Processing, Audio Signal Processing, Speech Signal Processing

Electrical Engineering Department, University of Bridgeport

Instructor: Buket D. Barkana, Ph.D.

Graduate Teaching Assistant

January 2009 - May 2009

Non-linear Control Systems, Electrical and Electronics Engineering Department,

Eskisehir Osmangazi University

Instructor: Osman Parlaktuna, Ph.D.
